Think *Modern* For Your Charge System Needs

- System Design
- Skip Chargers
- Charge Buckets
- Weigh Hoppers
- Hoist Units
- Charge Make-up Systems
- Control Integration
- Charger Rebuilds & Upgrades
- Installation Services

Since Modern built the first skip-type charger, a steadily increasing number of material handling developments have contributed greatly to world-wide increases in foundry tonnages. All basic types of charging systems are custom built and erected in the field to serve the ever growing needs of foundries. Programmed and highly automated charging systems are helping to boost over-all tonnages. Through varied application experience gained in designing, building, and erecting hundreds of mechanical chargers, Modern engineers have acquired the needed "know-how" to combine the best features to serve your specific needs.
